What is Synexcoin

Synexcoin is a pure investment token.

The special thing about our token is that when you hold the tokens, you benefit from a fixed interest rate from 5% per Month in shares from the trading pool in BTC.

Token holders benefit from a fixed 5% rising of the token price, the trading pool will be started on 01/05/2018.

There are many projects, why should we be different?

We are one of the few projects who are not interested to make profit only with the customer's money, we want to make a profit together.

That's why we set up a big trading pool for the token holders.

Many projects spend money on advertising, marketing and other costs.

We invest 100% of the funds in our trading pool for the investor and pay the holders a fixed 5% interest rate each month from this pool.

How can I make profit

We are NOT a lending platform, you can sell your tokens at any time or buy new trough our platform, there are no deadlines, you can take your money back at any time.

The starting price of the token is fixed at 0.0001 BTC and will increase steadily by 5% each month.

This means that every holder can generate a passive income only with just holding the tokens.

You can only redeem or buy new tokens during our website for a fixed BTC price, tokens can only be redeemed for BTC.

To enter the pool you need to pay a entry fee of 5% from your invested BTC amount, but if you hold your tokens until the first of a month you get 5% interest and so you can compensate the entry fees.

Working experiences in UK, USA, Switzerland, Germany and France from 1993 - 2017

Support languages in english, french, italien and german

Last Project & Social Media

For our last project "Synexcoin" we unfortunately choose a wrong time and therefore decided to make "Synexcoin 2.0".

Our last project was not yet fully developed and was more of a test phase and still we are very happy to have found so many interested in our last project.

We gave a 100% Bonus to our last ICO participants as a thank for the trust of the community in our project.

Our total amount earned was 937.9989 ETH and we repaid 1875.9978 ETH in total.

Thanks to all who participated from our last project.
